wanders
fires & stoves

This appliance has been tested and certified for other countries (see technical data). However to install appliance in other countries, modification of the appliance and its method of installation may be necessary in order to use the appliance safely and correctly. The manual for the local language must be obtained. Contact Wanders for further information.

1. General Notes

- This Wanders gas appliance is a High Efficiency, Balanced Flue Live Fuel Effect appliance. It provides radiant and convected heat using the latest burner technology. As well as having a variable heat output, these fires also utilise a special control system that allows the appliance to use two burners for high output or a single burner for lower outputs.
- One of the burners will be designated as the "Main" Burner, this is the Front, the second burner will be designated as the "Effect" Burner. The Effect burner can be switched ON or OFF whilst the appliance is alight.
- Before Installation, check that the local distribution conditions, nature of the gas and pressure, and adjustment of the appliance are compatible.
- This appliance is intended for use on a gas installation with a governed meter.
- This Gas Installation may only be installed by a registered professional competent person (Gas Safe installer in the UK). The installation must adhere to the requirements of the local and national Building regulations and national standards. The installation manual must also be followed.
- Ensure that the Flue Terminal is not in any way obstructed and is clear of vegetation, i.e. trees, shrubs etc. and that no objects are leant against the terminal or guard.
- Always clean the Window Panel before the fire is ignited. Any finger prints must be removed, as these will be burnt into the glass and will be un-removable.
- Do not operate this appliance if the glass panel has been broken (or cracked), removed or is open.
- The appliance is designed to fit numerous installation situations as listed in these installation instructions. However only flue approved by Wanders for this appliance may be used.
- This appliance is a balanced flue product and is room sealed and as such requires no additional ventilation for operation. However an adequate supply of fresh air to maintain temperatures and a comfortable environment is recommended.
- This appliance is designed as a heating appliance, and as such will get very hot in operation; all surfaces (except the controls and access door) are considered to be working surfaces and as such should not be touched. The front windows and surrounds are not considered to be fully secure guards against accidental contact. It is recommended that an approved fire screen be used if children, the elderly or persons with limited mobility are to be present in the same area.
- Do not place curtains, laundry, furniture etc. within a safe distance of 300mm of this appliance.
- Do not attempt to burn rubbish on this appliance.
- If this appliance is extinguished, on purpose or other, no attempt to relight should be made within 3 minutes.

2. User instructions

2.1 First Time of Operation

Before igniting the appliance, ensure that all packaging, safety stickers and any protective wrapping have been removed, and that the glass has been cleaned, including all fingerprints from the glass.

Ensure that the room is adequately ventilated the first time that the appliance is ignited; we would recommend opening windows if possible. Run the appliance at full setting for a few hours so that the paint gets an opportunity to fully cure. During this period it is possible for some fumes and vapours to be given off. We would recommend keeping children and pets out of the area at this time.

2.2 Remote control

Please refer to the separately added manual for the SYMAX remote control system.

2.3 Wanders Eco Wave App control (optional)

Please refer to the separately added manual for the Wanders Eco Wave control system.

2.4 Cleaning and Maintenance

This appliance should be inspected and serviced once a year by a qualified, competent and registered person. The inspection and maintenance must at least ensure that the appliance is working correctly and safely. It is advisable to clean the appliance of any dust and debris before regularly during the heating season and especially if the appliance has not been used for some time. This can be done with a soft brush and a vacuum cleaner or a damp cloth and if required a non-abrasive cleaning agent. Do not use corrosive or abrasive substances to clean the appliance.

3. Installation instructions.

Before commencing Installation, confirm that the details on the appliance data plate correspond to the local distribution conditions, gas type and pressure to which the appliance is to be installed.

Ensure that gas supply and supply pipe is capable of delivering the required volume and pressure of gas and is in accordance with the rules in force.

3.1 Gas Connection

This appliance has a gas inlet connection of Ø 8mm.

3.2 Ventilation

This appliance is a Balanced Flue room sealed appliance, and as such needs no additional ventilation. However an adequate supply of fresh air to maintain temperatures and a comfortable environment is recommended.

This appliance may be installed in a completely sealed or mechanically ventilated house.

3.3 Appliance Fireplace Installation

- Determine the position required for the appliance.
- Create a gas connection for the appliance in approximately the correct location for the gas controls.
- The gas controls are connected to the Burner of the appliance. These controls need to be located in the control access box, so an appropriate position for the access box needs to be determined.
- This appliance has fully adjustable legs, these must be set to the desired length before the flue position is finalised. Fine adjustment of the legs is available via the feet.
- Do not make any adjustments to the appliance, except the leg length.
- The appliance should be fitted with a minimum clearance of 150mm from any combustible objects or materials; this includes any combustible materials used for the fireplace construction. This clearance distance can be reduced to 50mm if a Cement Board, of minimum thickness 12mm is used. This Cement Board will act as a Thermal Break.
- The clearance distance of the Flue from combustibles must not be less than 75mm. This dimension can be reduced to 25mm as the distance from the underside and the sides of Horizontal Flue runs.

- As this is a room sealed appliance and the appliance stands on appropriate legs, a hearth is not required for this appliance.
- The Fireplace should be ventilated with openings giving a total free vent area of 200 cm².
- A gap of 50mm should be left all round the appliance.
- If a shelf is to be fitted above the fireplace opening, a gap of 150mm minimum should be left between the opening and the shelf. See section 3.3.3, Mantel Clearances.
- The brackets supplied may be used for securing the appliance to a rear wall.

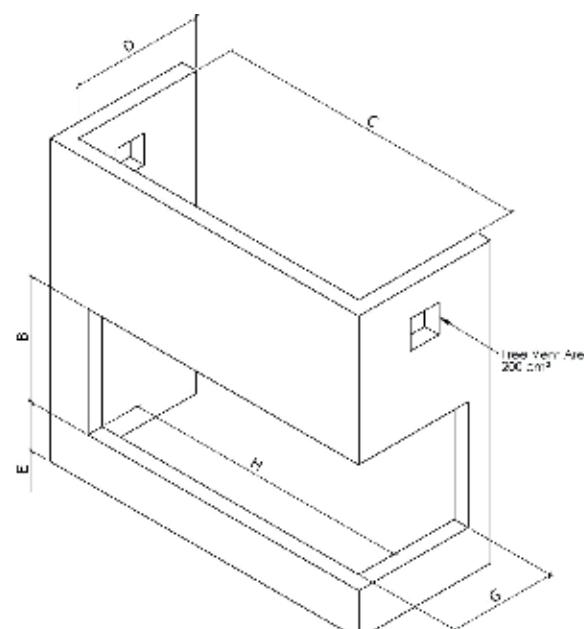

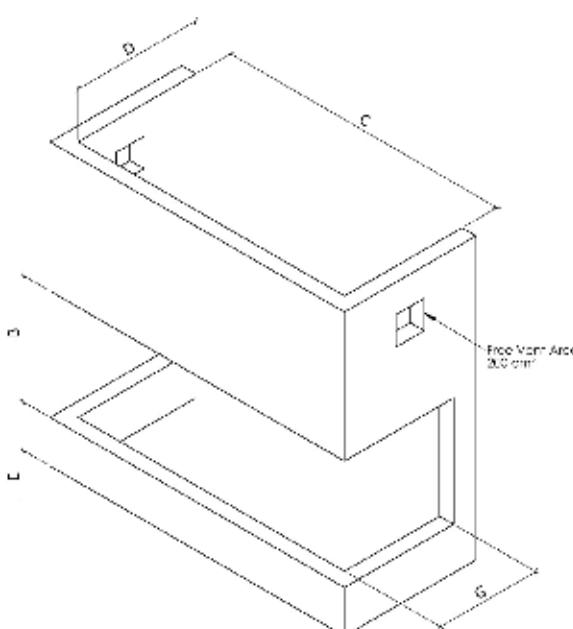

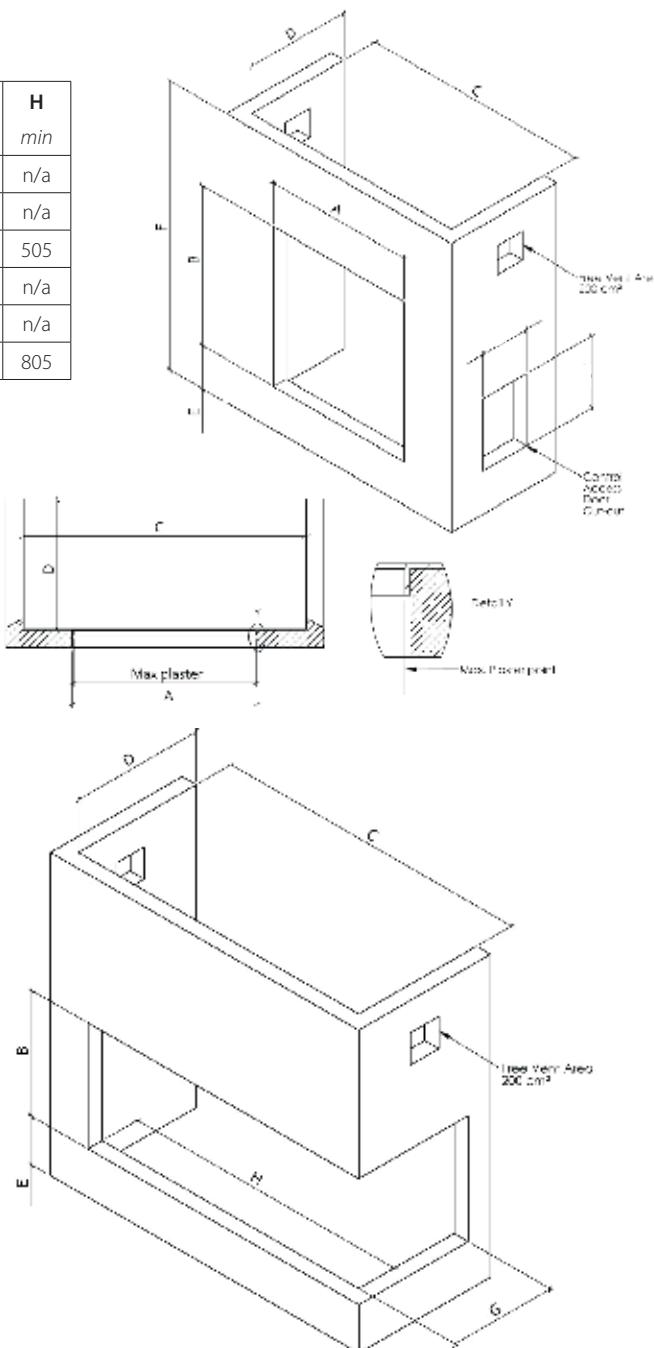

3.3.1 Building the Fireplace

- Construct a studwork fireplace to the desired sizes, minimum sizes are shown in section 3.3.2. Any combustible material used to construct the Fireplace must not be closer than the minimum dimensions quoted in section 3.3 above. Cement Board of minimum thickness 12mm, can be used as a Thermal Break and can be used directly against the Frame Face on the appliance.
- Do not use insulation material (or other) to pack the void around or above the appliance.
- Provide ventilation from the fireplace to the minimum amount quoted in 3.3 above.
- Provide a cut-out for the Control Access Door.

3.3.2 Built-In Fireplace Sizing

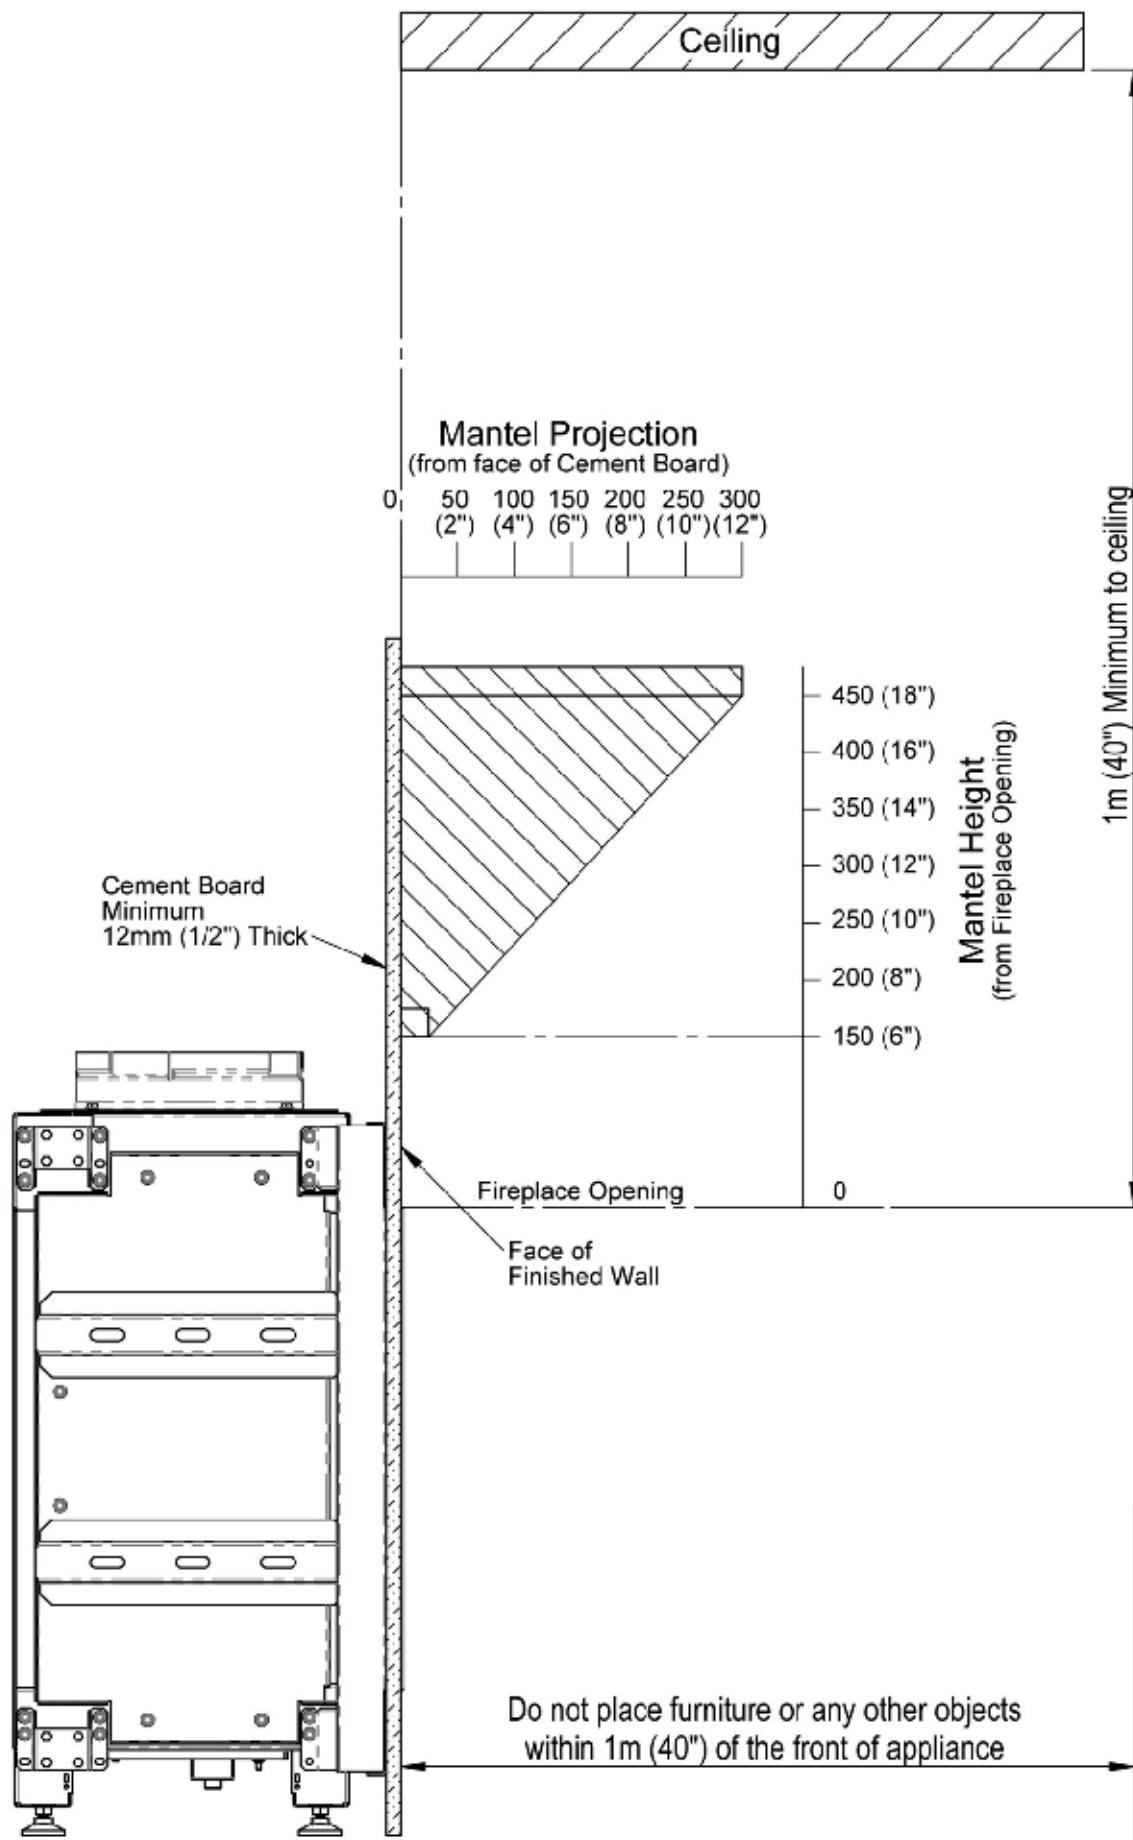

(assuming a Cement Board Lining is used)

Appliance	A min	B min	C min	D min	E min	F min	G min	H min

3.3.3 Mantel Clearances

3.3.3.a Combustible Mantel - side view

3.3.3.b Combustible Mantel/Side Wall - top view

3.4 Flue Connection

3.4.1. General Notes

This appliance may be installed with a roof terminal (C31) or a wall terminal (C11).

This appliance may only be used with Balanced Flue (otherwise known as Concentric Flue) parts as specified by Wanders. The Wanders specified flue parts have been approved with the appliance. If the appliance is installed on non-Wanders approved parts, Wanders cannot guarantee or accept and responsibility for the proper and safe working of the appliance.

The flue system must be constructed from the appliance upwards, with all joints being fully locked and sealed using the Wanders specified parts. Flue systems approved for this Appliance:

- Muelink & Grol (M&G) Concentric.
- Poujoulat PGI.
- Metaloterm US.

3.4.2 Timber Frame Construction

Whilst it is possible to install room-sealed appliances in timber frame properties, great care needs to be taken to ensure that the flue assembly does not interfere with the weather proofing qualities of any outer wall which it may penetrate. Before attempting this work, further details need to be referenced, (e.g. "Gas Installations in Timber Frame Buildings" from the CORGI installer series in the UK).

3.4.3 Carport or Building Extension

Where a flue terminal is sited within a carport or building extension, it should have at least two completely open and unobstructed sides. The distance between the lowest part of the roof and the top of the terminal should be at least 600mm.

Note: A covered passageway should not be treated as a carport. Flues should not be sited in a covered passageway between properties.

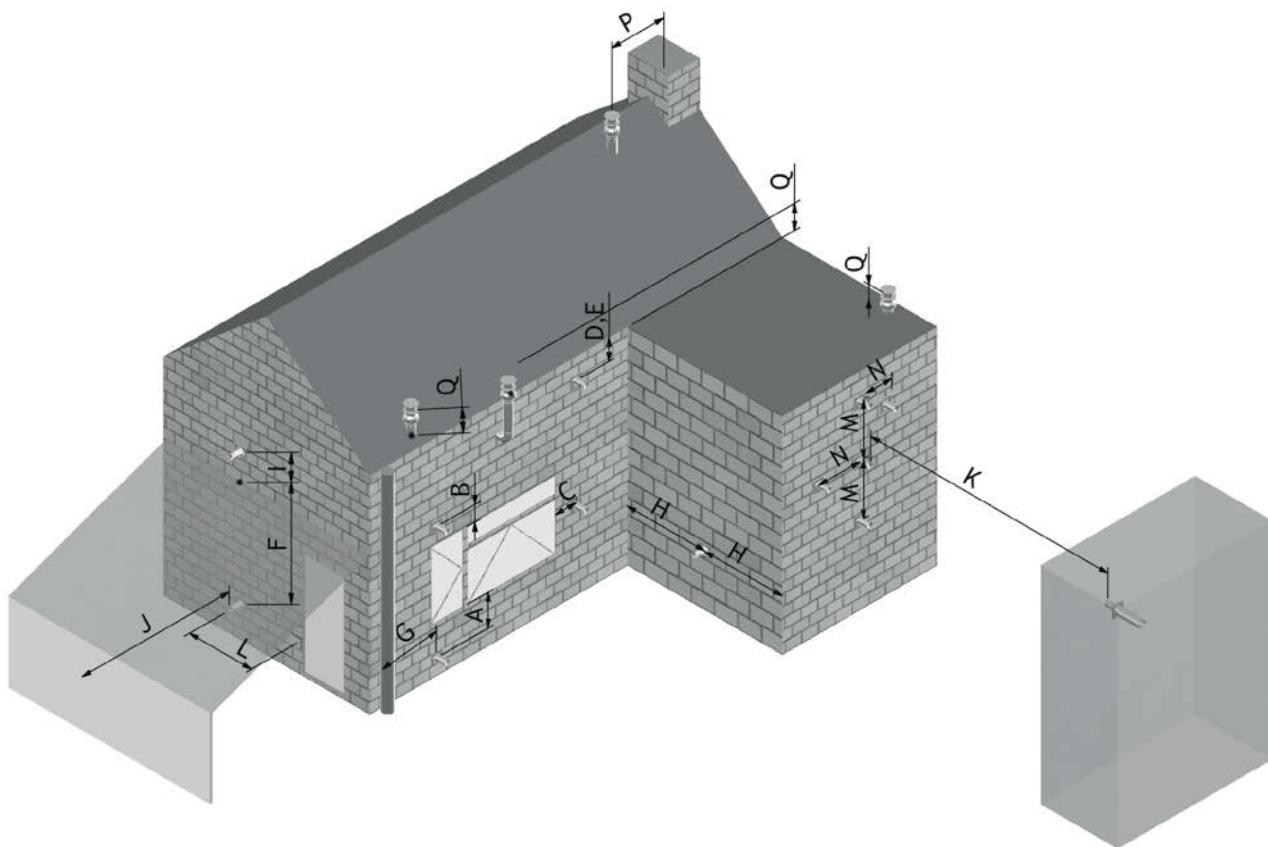

3.4.4 Basements, Lightwells and Retaining walls

Flue terminals should not be sited within the confines of a basement area, light well or external space formed by a retaining wall, unless steps are taken to ensure the products of combustion can disperse safely at all times. It may be possible to install this Balanced Flue system in such a location provided that it is not sited lower than 1m from the top level of that area to allow combustion products to disperse safely.

Flue terminals should be sited to ensure total clearance of the combustion products in accordance with the included information.

When the products of combustion are discharged, they should not cause a nuisance to adjoining or adjacent properties and they should be positioned so that damage cannot occur to other parts of the building. If the outer wall surface is constructed of combustible material, a non-combustible plate should be fitted behind the terminal projecting 25mm beyond the external edges of the terminal.

3.4.5 Terminal Locations

Dimension	Terminal Position	Distance (mm)
A*	Directly below an opening, air brick, opening window etc.	600
B	Above an opening, air brick, opening window etc.	300
C	Adjacent to an opening, air brick, opening window etc.	400
D	Below gutters, soil pipes or drain pipes	300
E	Below eaves	300
F	Below balconies or car port roof	600
G	From a vertical drain pipe or soil pipe	300
H	From an internal or external corner	600
I	Above ground roof or balcony level	300
J	From a surface facing the terminal	600
K	From a terminal facing the terminal	600
L	From an opening in the car port (e.g. door, window into the dwelling)	1200
M	Vertically from a terminal on the same wall	1500
N	Horizontally from a terminal on the same wall	300
P	From a vertical structure on the roof	600
Q	Above intersection with roof	150

* In addition, the terminal should not be nearer than 300mm to an opening in the building fabric formed for the purpose of accommodating a built in element such as a window frame.

3.4.6 Horizontal Wall Vent Termination type C11

Flue sizing and regulations.

Lenga 500

- Ø100/150 Connector on appliance.
- Ø100/150 to be used throughout.
- Maximum horizontal length is 3 meters.
- Minimum vertical length directly on appliance is 1 meter.
- Maximum pipe extension for outside wall (H) is 2 x vertical pipe rise (V).
- Maximum length of the entire system (excl. outlet terminal) is 10 meters.
- Flue Terminal: Ø100/150 Part No. INK.4330

Lenga 800

- Ø130/200 Connector on appliance.
- Ø130/200 to be used throughout.
- Do NOT reduce to 100/150.
- Maximum horizontal length is 3 meters.
- Minimum vertical length directly on appliance is 1 meter.
- Maximum pipe extension for outside wall (H) is 4 x vertical pipe rise (V).
- Maximum length of the entire system (excl. outlet terminal) is 10 meters.
- Flue Terminal: Ø130/200 Part No. INK.4430

3.4.7 Vertical Roof Vent Termination type C31

Flue sizing and regulations.

Lenga 500

- Ø100/150 Connector on appliance.
- Ø100/150 to be used throughout.
- Maximum horizontal length is 3 meters.
- Minimum vertical length directly on appliance is 1 meter.
- Maximum length of the entire system (excl. outlet terminal) is 10 meters.
- Flue Terminal: Ø100/150 Part No. INK.4335

Lenga 800

- Ø130/200 Connector on appliance.
- Ø130/200 to be used throughout.
- Reducing to 100/150 is allowed if the flue run is entirely vertical with a maximum length of 10 meters. The first meter needs to be 130/200.
- Reducing to 100/150 is allowed when the flue run has elbows in it, but only at the very last moment just before the roof outlet.
- Maximum horizontal length is 3 meters.
- Minimum vertical length directly on appliance is 1 meter.
- Maximum length of the entire system (excl. outlet terminal) is 10 meters.
- Reducer Ø130/200 > 100/150 Part No. INK.4490
- Flue Terminal: Ø100/150 Part No. INK.4430

3.4.8 Flue restrictors to be fitted

The restrictor can be installed with the pre-installed M5x20 bolts

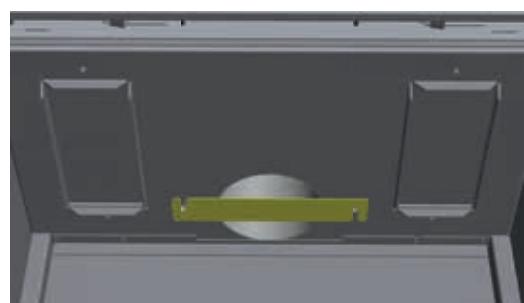

Lenga 500

Wall terminal:

- Ø100/150, vertical rise 1 meter, no restrictor
- Ø100/150, vertical rise > 1 meter, 35 mm restrictor

Roof terminal:

- Ø100/150, vertical rise < 2 meter, 35 mm restrictor
- Ø100/150, vertical rise > 2 meter, 60 mm restrictor

Lenga 800

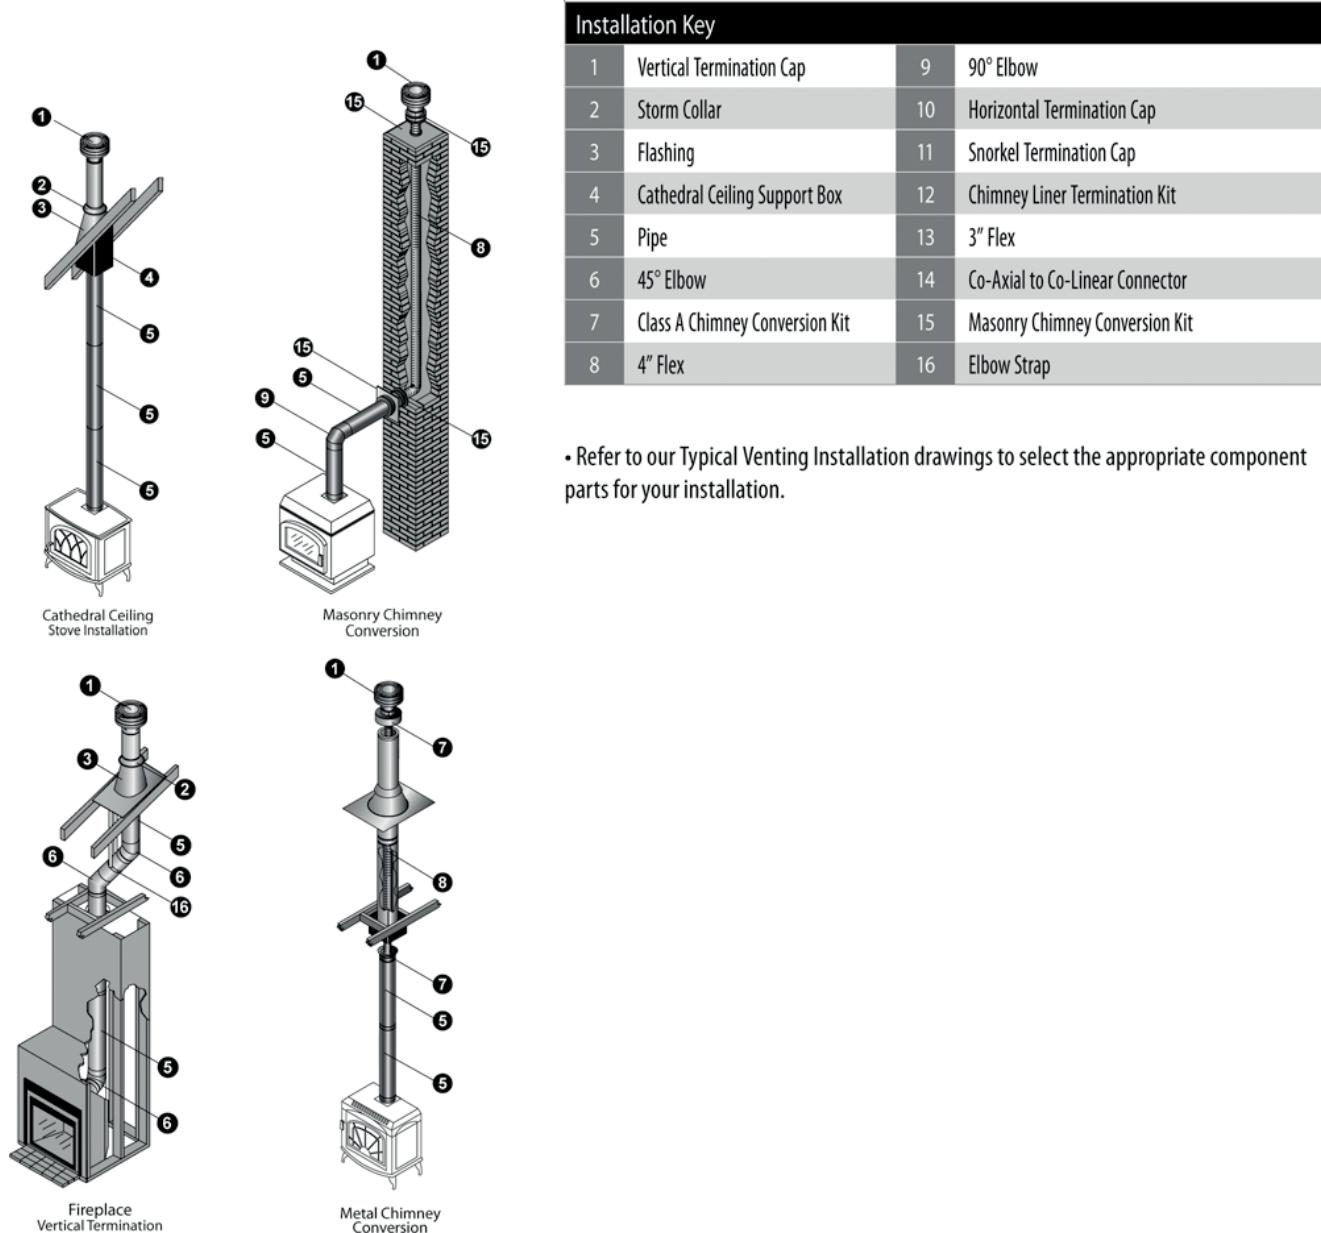

Wall terminal:

- Ø130/200, vertical rise 1 meter, no restrictor
- Ø130/200, vertical rise 1-2 meter, 35 mm restrictor
- Ø130/200, vertical rise > 2 meter, 50 mm restrictor

Roof terminal:

- Ø130/200, vertical rise < 1 meter, no restrictor
- Ø130/200, vertical rise 1-2 meter, 35 mm restrictor
- Ø130/200, vertical rise 2-4 meter, 50 mm restrictor
- Ø130/200, vertical rise > 4 meter, 60 mm restrictor

3.4.9 Typical installations

3.5 Fuel Bed Media and Arrangements

Please note that all arrangements are viewed from the front of the appliance, with the main burner at the front (effect burner at the rear).

Lenga 500

02 - ↑

03 - ↑

04 - ↑

05 - ↑

06 - ↑

07 - ↑

08 - ↑

09 - ↑

10 - ↑

11 - ↑

When arranging the media in the fire, it is always important to keep the mainburner (MAIN) clear from media unless otherwise instructed. The main burner needs to have an uninterrupted connection with the pilot burner (PILOT) and with logs of the effectburner that are connected to burner port 1 and 2 (BP 1 and BP 2)

Place log 03 on the burner plate as shown on the image.

Place log 02 on burner port BP 1 as shown on the image.

Make absolutely sure the log slides all the way over the connection.

Place log 04 on the burner plate as shown on the image. The log leans on log 03 and against log 02.

Place log 01 on burner port BP 2 as shown on the image. The log leans against log 02 at the top.

Make absolutely sure the log slides all the way over the connection.

Place log 05 on the left-back side of the burner. The log rests on log 03.

Place log 08 in the left front corner on the burner as shown on the image.

Place log 06 on the right side of the burner as shown on the image.

Place log 07 in front left of the middle as shown on the image.

Make absolutely sure the log doesn't block the main burner (MAIN).

Place the ceramic fibers (10). on the main burner (MAIN) and secure them with some small embers (09).

 Make absolutely sure the ember don't block the main burner (MAIN).

Scatter the remaining embers (09) evenly on the burnerplate.

 Make absolutely sure the embers don't block the main burner (MAIN).

Scatter the vermiculite grains (11) evenly over the burnerplate.

 Make absolutely sure the grains don't block the main burner (MAIN).

 At this last step also ensure that the front of the burner plate, as marked on the image, is free of decoration. The glass is installed in that area.

15 - ↑

When arranging the media in the fire, it is always important to keep the mainburner (MAIN) clear from media unless otherwise instructed. The main burner needs to have an uninterrupted connection with the pilot burner (PILOT) and with logs of the effectburner that are connected to burner port 1, 2 and 3 (BP 1, BP 2 and BP 3)

Place log 04 on the burner plate as shown on the image.

Place log 06 on the burner plate as shown on the image.

Place log 09 on the left side of the burner plate as shown on the image.

Place log 08 on the right side of the burner plate as shown on the image. The log leans against log 04.

Place log 05 on the back of the burner plate as shown on the image.

Place log 07 on the left of the burner plate as shown on the image.

Place log 01 on burner port BP 3 as shown on the image. The log leans against log 04.

Make absolutely sure the log slides all the way over the connection.

Place log 02 on burner port BP 2 as shown on the image. The log leans against log 01.

Make absolutely sure the log slides all the way over the connection.

Place log 03 on burner port BP 1 as shown on the image. The log leans against log 02.

Make absolutely sure the log slides all the way over the connection.

Place the ceramic fibers (14). on the main burner (MAIN) and secure them with some small embers (13).

Make absolutely sure the ember don't block the main burner (MAIN).

Scatter the remaining embers (13) evenly on the burnerplate.

Make absolutely sure the embers don't block the main burner (MAIN).

Place log 10 on the front of the burner plate as shown on the image.

Place log 11 on the embers between log 02 and 09 as shown on the image.

Place log 12 on the embers in the left back corner as shown on the image.

Scatter the vermiculite grains (15) evenly over the burnerplate.

Make absolutely sure the grains don't block the main burner (MAIN).

At this last step also ensure that the front of the burner plate, as marked on the image, is free of decoration. The glass is installed in that area.

3.6 Commissioning the Appliance

3.6.1 Pilot Ignition Check

1. Ignite the pilot light as described in the User Instructions
2. Check that the pilot flame stays alight
3. Extinguish the pilot light

3.6.2 Main Burner Check

1. Ignite the pilot light as described in the User Instructions
2. Turn on the main burner as described in the User Instructions
3. Check that the pilot smoothly cross-lights to the main burner and that the main burner and pilot stay alight
4. Check the operation of the second "effect" burner as described in the User Instructions
5. Extinguish the appliance fully

3.6.3 Pressure Check

The appliance is preset to give the correct heat inputs as listed in the technical details. No further adjustment is necessary. Always check the inlet pressure and burner pressure.

1. Turn off the gas valve on the appliance
2. Release the screw on the Inlet Pressure test point on the gas valve and connect a manometer
3. Check that the measured pressure is as the prescribed supply pressure
4. Perform the test when the appliance is burning on full (inc. "effect" burner) and with only the pilot alight
5. If the pressure is low, check the gas supply pipes are too a correct sizing
6. If the pressure is too high (more than 5 mbar over) the appliance may be installed, but the gas supply company should be contacted
7. Release the screw on the Burner Pressure test point on the gas valve and connect a manometer
8. Check that the measured pressure is as detailed in the Technical details
9. The measured value should be within +/- 10% of the described value. If this is not the case, please contact the supplier.

Note: After checking the pressures and removing the manometers, the screws in the Pressure Test points must be closed, and the system must be checked for gas-tightness.

4. Servicing

Turn the appliance OFF and isolate the gas supply. Ensure the appliance is fully cold before attempting to start servicing the appliance. No liability can be accepted by Wanders for injury caused by burning or scalding by a hot appliance.

A suggested procedure for servicing is listed below.

- A. Lay out dust sheet on flooring, mask off any special fireplace materials.
- B. Remove Side Window Trims
- C. Remove Bottom Window Trim
- D. Remove Window Assembly
- E. Carefully remove the Ceramic components (including Embers) or Gravels
- F. Use a Vacuum cleaner to clean the top of the burners and grate
- G. Remove Grate
- H. Remove all 3 Burner Top assemblies, there are 3 M6 flange bolts holding each in
- I. Using a vacuum cleaner, fully clean both Burner Top.
- J. With the Burner Tops now removed, the Pilot and the heads of the injectors are clearly visible. Use the vacuum cleaner and a soft brush to clean the pilot assembly and both Injectors. Never modify or bend the Thermocouple
- K. Replace the burner top assemblies and fix in with the fixings
- L. Turn on the gas supply and check for leaks, check the burners and Pilot for good condition and operation

- M. Replace Grate
- N. Replace the Firebed arrangements
- O. Replace Window Assembly and Trims
- P. Check the flue system and terminal, making sure that the terminal vent is fully clear
- Q. Light the appliance and test setting pressures
- R. Check the safe operation of the appliance.

4.1 Cleaning the Ceramics

Remove the ceramics as detailed in A - E above.

Gently clean the ceramics in the open air, using a soft brush and a vacuum cleaner. Where necessary replace damaged components only with genuine Wanders specified parts. Seal any scrap ceramics in plastic bags and dispose at proper refuse sites. When using a vacuum cleaner, it is recommended that one with a HEPA filtering system is used.

Re-fit the Firebed arrangement, re-seal the appliance and check the safe operation of the appliance.

4.2 Servicing the Burners

Remove the Burner Top Assemblies as detailed in A - H above.

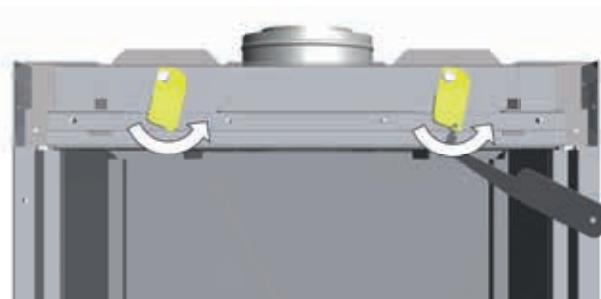

The pilot is now clearly visible, the pilot, including the Thermocouple, can be replaced/serviced by removing raising the pilot assembly from its mounting. This is done by removing the two screws on the surface of the pilot. The fittings on the under-side of the pilot can be un-done using a 10mm spanner where appropriate.

To access the Main Burner Injectors, the Burner base units must be removed. This is done by removing the six bolts (M6, 10mm spanner) holding the burner in. With these six bolts removed, the Burner base can be raised up through the Firebox, and the Injectors can be easily accessed.

When replacing any parts use only original Wanders specified parts.

4.3 Opening the Glass

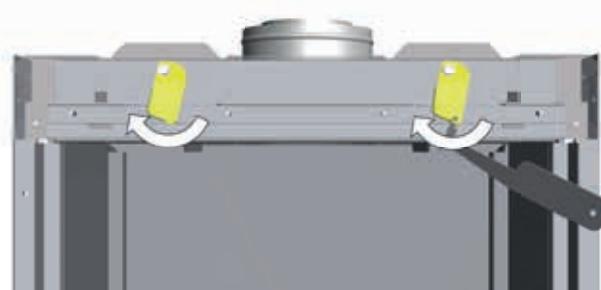

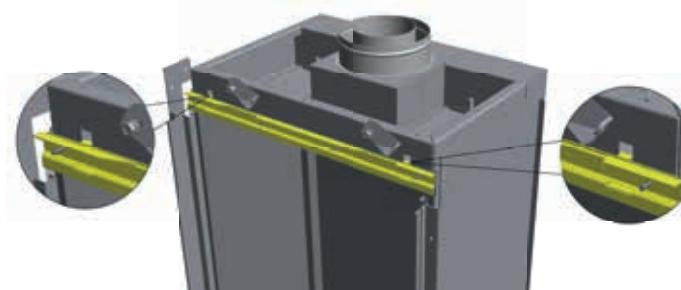

- Place the suction lifter on the middle of the glass. Make sure the glass is not hot.

- Open the glass clamps with the enclosed hook.
- Pull the glass slightly towards you.
- Lift the glass slightly and pull to bottom towards you.
- Put the glass aside carefully.

Terugplaatsen van de glasruit

- Place the glass at the base of the mainburner. Make sure the area is clear of any media covering the burner.
- Push the top of the glass in its place. Make sure the 2 steel tabs lock in the frame of the appliance.
- Pull the glass clamps down to lock the glass.
- Remove the suction lifter.

Onder de garantie vallen alle gebreken die te herleiden zijn tot materiaal- en constructiefouten. In die gevallen ontvangt u gratis nieuwe onderdelen. Arbeidsloon en andere kosten vallen niet onder de garantie. Defective onderdelen kunt franco toezenden aan WANDERS Metaalproducten B.V., Amtweg 4, 7077 AL, Netterden.

Voor dat de haard geplaatst wordt, moet u controleren of er zichtbare schade is aan het toestel.
In dat geval moet u het toestel niet accepteren, maar contact opnemen met uw leverancier.

Buiten de garantie vallen: het glas, storingen ontstaan door onoordeelkundig gebruik; niet juiste naleving van de landelijke voorschriften en de bijgevoegde installatie- en bedieningsvoorschriften; installatie door een niet door WANDERS erkend installateur of dealer; verwaarlozing van het toestel en bij wisseling van eigenaar. De garantie vervalt ook bij gebruik van een verkeerde brandstof.

WANDERS is niet verantwoordelijk voor eventuele scheuren in sierpleisterwerk en verkleuringen van wanden, plafonds en/of roosters na het stoken van de haard. Verkleuringen kunnen ontstaan doordat stofdeeltjes verbranden in de convectiemantel. Om de kans op scheuren in sierpleisterwerk en eventuele verkleuringen te minimaliseren verwijzen wij naar het advies dat gegeven wordt in de sfeerhaardenbranche. Uw installateur kan u hierover informeren.

Klachten worden in behandeling genomen nadat de verkoopfirma/installateur of het gasbedrijf een klacht heeft ingediend, vergezeld van de aankoopdatum en een kopie van de aankoopbon. Reparaties geven geen recht op verlenging van de garantietijd.

Alle gevolgshade wordt uitgesloten.

The guarantee includes all defects which can be reduced to flaws in material and construction, in which case you will receive the new parts free of charge. Labour costs or other expenses are not covered by the guarantee. You can send defect parts (shipping paid) to WANDERS Metaalproducten B.V., Amtweg 4, 7077 AL in Netterden [The Netherlands].

Before installing your stove you must check if there is any visible damage to the unit. If there is, do not accept the unit and contact your supplier.

The guarantee does not include: the glass, failure due to improper use; non-compliance with the national regulations and enclosed installation and operating instructions; installation by an installer or dealer who is not acknowledged by WANDERS, negligence of the unit and change of owner. The guarantee is also disclaimed when a wrong fuel is used.

WANDERS disclaims responsibility for any cracks in stuccoed walls or discolouration of walls, ceilings and/or grates after burning the fireplace. Discolouration can be caused when dust particles burn in the convection cover. To minimize the chance of cracks in stucco and discolouration we refer to the advice given for decorative hearths. Your installer can give you more information.

Any complaints will be dealt with after the sales firm, the installer has filed a complaint and sent a copy of the purchase receipt with purchase date. Any repairs do not entitle you to extend the guarantee term.

All consequential damages or loss are excluded.

La garantie couvre tous les défauts qui résulteraient des vices de matière et de construction. Dans ces cas, vous recevrez des pièces nouvelles gratuitement. Les frais de salaire et les autres frais n'entrent pas dans le champ de la garantie. Les pièces défectueuses peuvent être expédiées franco à WANDERS Metaalproducten B.V., Amtweg 4, 7077 AL, Netterden, Pays-Bas.

Avant de procéder à la pose de l'appareil vous devrez vérifier si le poêle ne présente pas des dommages visibles. Dans ce cas, il ne faut pas accepter l'appareil en prendre contact avec votre fournisseur.

La garantie ne couvre pas la vitre et ne s'applique pas aux dérangements provenant d'une mauvaise utilisation, d'un manque de respect de la réglementation nationale et des instructions d'installation et d'emploi fournis avec l'appareil, d'une installation effectuée par un installateur ou revendeur non-agréé par WANDERS, d'un défaut d'entretien et en cas où le poêle serait passé en d'autres mains. La garantie ne s'applique pas non plus si un combustible non approprié a été utilisé.

WANDERS n'est pas responsable des éventuelles fissures au plâtrage de parement et des décolorations des parois, plafonds et/ou grilles après le chauffage du poêle. Les décolorations peuvent être causées par la combustion des grains de poussière dans le manteau de convection. Pour réduire au maximum les fissures au plâtrage et les décolorations éventuelles, veuillez vous reporter aux consignes généralement données dans le commerce sur les poèles d'ambiance. Votre installateur vous renseignera.

Les plaintes sont examinées après qu'elles ont été présentées par l'établissement de vente, par l'installateur, accompagnées d'une copie de la facture d'achat indiquant la date d'achat. Les réparations ne donnent pas droit à une prorogation de la durée de garantie.

Les dommages conséquents sont exclus.

Unter diese Garantie fallen alle Mängel die auf Material- oder Konstruktionsfehler zurückzuführen sind. In diesen Fällen erhalten Sie gratis neue Ersatzteile. Der Arbeitslohn und andere Kosten fallen nicht unter die Garantie. Fehlerhafte Teile können Sie franco an WANDERS Metaalproducten B.V. Amtweg 4, 7077 AL Netterden (Holland) schicken.

Vor Montage des Ofens müssen Sie kontrollieren ob das Gerät keine sichtbaren Schäden aufweist. In dem Fall müssen Sie das Gerät nicht akzeptieren, müssen aber mit Ihren Lieferanten Kontakt aufnehmen.

Nicht unter die Garantie fallen: Störungen die durch nicht sachgemäßen Gebrauch entstanden sind; nicht strikte Befolgung der Installations- und Bedienungs-Vorschriften; Montage durch einen nicht von WANDERS anerkannten Installateur, Vernachlässigung des Ofens und bei einem Wechsel des Besitzers. Die Garantie verfällt auch, wenn verkehrtes Heizmaterial benutzt wurde.

Wanders ist nicht verantwortlich für eventuelle Risse im Feinputz und Verfärbungen der Wände, Decken und/oder Roste nach Heizen des Ofens. Verfärbungen können entstehen weil Staubteilchen im Konvektionsmantel verbrennen. Um eventuelle Risse im Feinputz und Verfärbungen zu minimalisieren, verweisen Sie auf den Rat der von der Branche für Kaminöfen gegeben wird. Ihr Installateur kann Sie darüber informieren.

Reklamationen werden erst dann behandelt, wenn die Verkaufsfirma, der Installateur eine Reklamation, zusammen mit einer Kopie des Kassenzettels mit Kaufdatum, eingereicht hat. Reparaturen berechtigen nicht zu einer Verlängerung der Garantie.

Alle Folgeschäden sind ausgeschlossen.
